## DETAILED ACTION

### *Priority*

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2 and 6-8 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Cunkelman (US 6,128,825).

Claims 11-12 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Beck et al. (US 6,640,463).

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.

Art Unit: 3749

2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Cunkelman in view of LaMarca et al. (US 2002/0175791). Cunkelman is considered to clearly anticipate the claimed invention, except for the claimed DIN spade connectors. LaMarca, another plug and socket electronic control device, is considered to disclose DIN spade connectors at paragraph 37. It would have been obvious to one skilled in the art to combine the teachings Cunkelman with the DIN spade connectors, considered disclosed in LaMarca, for the purpose of improving electric solenoid valve actuation for control and a method of manufacture.

Claims 4-5 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cunkelman in view of MacDonald (US 5,563,585). Cunkelman is considered to clearly anticipate the claimed invention, except for the claimed viewable display devices through part of a transparent housing including and alarm. MacDonald, another device for controlling flow, is considered to disclose viewable display devices through part of a transparent housing including and alarm at column 3 lines 23-45 and column 5 lines 54-66 respectively. It would have been obvious to one skilled in the art to combine the teachings Cunkelman with the viewable display devices through part of a transparent housing including and alarm, considered disclosed in MacDonald, for the purpose of allowing visual monitoring and allowing set point triggering user notification.

Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Cunkelman in view of Thomas (US 5,563,585). Cunkelman is considered to clearly

Art Unit: 3749

anticipate the claimed invention, except for the claimed purge cycle loading time delay. Thomas, another gas dryer, is considered to disclose purge cycle loading time delay at column 2 line 31 through column 3 line 55. It would have been obvious to one skilled in the art to combine the teachings Cunkelman with the purge cycle loading time delay, considered disclosed in Thomas, for the purpose of causing standard regeneration of an air dryer when a predetermined condition is met.
